

KEEGAN CARES

SCOLIOSIS AWARENESS

SCOLIOSIS

- is a curve of the spine with rotation
- can be hereditary and/or idiopathic (cause unknown)
- tends to occur between ages 10-15
- affects 3 million people in U.S./yr

HI, I'M KEEGAN!

I love to sing and my dream is to perform on Broadway one day! But, when I was 13, I found out I had severe scoliosis, and I feared that dream would never become a reality.

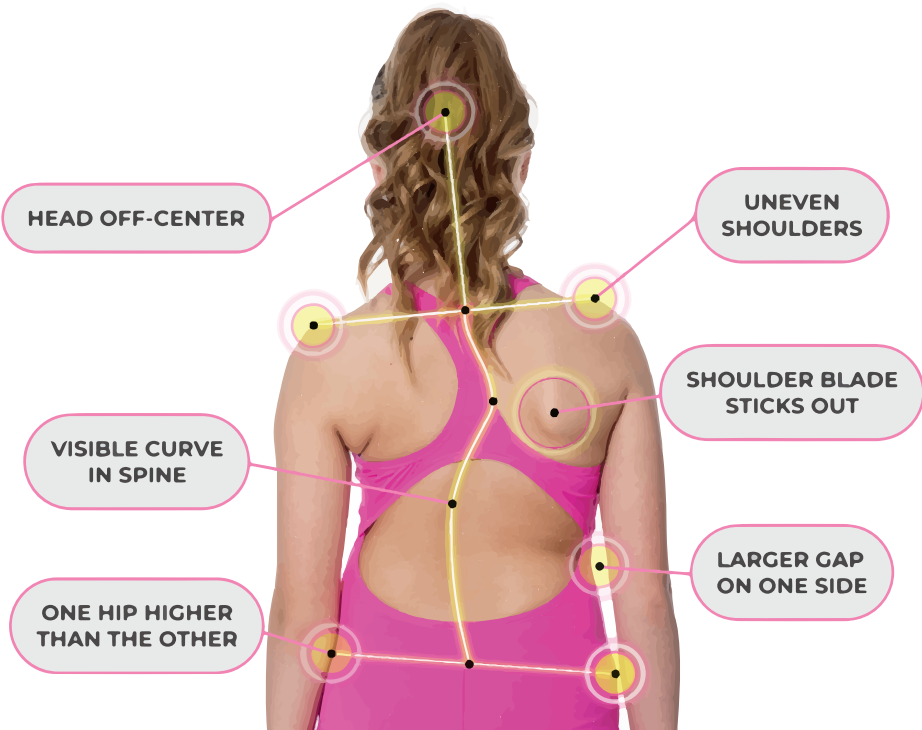

Like many others, my scoliosis went unnoticed. Adults often say they remember scoliosis checks in school, but in 2007, Indiana stopped requiring these screenings.

Because of this lack of attention, I created my nonprofit Keegan Cares where I educate others on the signs of scoliosis so they can take on the curves of their life!

I ADVOCATE FOR SCOLIOSIS AWARENESS BY:

- Speaking to students and mentoring families
- Presenting to an FDA panel
- Appearing on TV, radio, and social media
- Partnering with national organizations
- Crafting a Keegan Cares Bill to reinstate school screenings

SIGNS OF SCOLIOSIS

GET CHECKED!

Ask your doctor to check for scoliosis.
It only takes a few seconds!
